

In the Specification:

Kindly replace the fifth full paragraph on Page 8 with the following rewritten replacement paragraph:

--Practical experiments have shown good results in clothing articles where the compression area has the above elasthane shares, and where elasthane yarn thickness is from 100 to 350 dtex decitex, preferably from 150 to 250 dtex decitex. The elasthane yarn may be single thread or be braided with thin yarn (typically PA, PES, cotton or viscose).--
